

# INTRODUCING WORM COMPOST BINS

Turn kitchen waste into nutrient-rich gold with ease!

## HOW DOES IT WORK?

### WASTE CONSUMPTION

The worms compost the waste. Worms can process any organic material including kitchen waste, empty egg cartons or small amounts of garden trash. This is a sustainable way to dispose of waste.

### REPRODUCTION

This method of waste processing is an ongoing process. The worms double every three months. So there are always enough worms to turn the waste into compost.

### HARVESTING THE COMPOST

Is the bin full? Place a new bin on top of the full one. The worms will crawl towards the new waste and eventually the bottom bin will become worm-free. The compost from this bin can then be used for the garden.

### SUSTAINABLE WASTE DISPOSAL

The worms produce moisture as well as compost. The bottom container collects this moisture. Mix it 50/50 with water and you have perfect nutrition for your plants!
